BENEFIT ANALYSIS OF LICENSING NATUROPATHIC DOCTORS

May 2011

S1803/A1937

Sponsored by Senator LaValle and Assembly Member Hoyt
Summary of Provisions

A new Article 132-A is added to the Education Law to establish naturopathic doctors as licensed professionals in New York State.

This legislation also includes specific requirements for the education and residency training for naturopaths, the creation of a state board for naturopathy, and continuing education provisions.

Justification

Licensure will provide access to qualified Naturopathic Doctors (NDs) who provide care not offered by other currently licensed professionals: well-care. Licensure also allows for the creation of educational institutions that train NDs in New York (which is not possible until licensure exists).

Considering the rapidly increasing rate of chronic health issues, the lack of practitioners licensed to address chronic health issues, and the costs involved in addressing chronic health issues, licensing Naturopathic Doctors is a much-overdue and critical step in the future financial and medical well-being of New York State.

Definition

Definition of Naturopathy

Naturopathy is a science-based health care practice, that has existed in New York since the 1800’s, in which the least invasive therapies are applied first to address underlying causes of illness and to support the body to heal, thereby preventing progression of disease states. Underlying causes include various types of stress (from life factors, the environment, or nutritional deficiencies) that create difficulties for the body’s organs and biochemical imbalances. Naturopaths address chronic health issues, such as diabetes, obesity, asthma, and heart disease, using natural therapies. Natural therapies include diet and lifestyle, as well as clinical use of nutrients, nutritional supplements, botanicals (herbal therapies), homeopathic remedies and natural (plant based or glandular) hormones. Naturopathic Doctors are trained as primary care practitioners.
Current Problems in New York Health Care:
#1 Chronic Disease and Obesity is Increasing Every Year

Chronic diseases are the most prevalent and costly health care problems in the United States. Nearly half of all Americans suffer from at least one chronic disease.

The majority of New York adults - 61.9% - were either overweight or obese in 2008, a dramatic increase over the past two decades. ¹

Preventable Disease is Not Being Prevented

Chronic diseases such as diabetes, heart disease and some cancers are all considered preventable conditions yet the current health care system has shown little efficacy in preventative medicine. ²

Chronic diseases are leading causes of disability and death in the United States. Every year, chronic diseases claim the lives of more than 1.7 million Americans. These diseases account for more than 70% of the $1 trillion spent on health care each year in the United States. ³

Although chronic diseases are among the most prevalent and costly health problems, they are also among the most preventable. Effective measures exist today to prevent or delay much of the chronic disease burden and curtail its devastating consequences, yet, the numbers continue to increase. ³

#2 Health Care Costs are Rising

In New York State, $5.4 billion is spent annually in excess health care costs for obese adults. ¹

</table>

Individuals who are overweight or obese are more likely to develop chronic medical conditions that not only hurt their quality of life, but also contribute to the rising cost of health care. ¹

Chronic disease accounts for about 75 percent of the nation's aggregate health care spending - or about $5,300 per person in the U.S. each year. ⁴

⁴ Centers for Disease Control and Prevention (CDC)
Nearly 60% of New York City’s zip codes have an inadequate supply of primary care physicians for low-income New Yorkers.  

Although 39% of New York City’s residents are enrolled in Medicaid, they have access to just 25% of the primary care physicians based in the City. New York City needs to eliminate primary care shortages for Medicaid-enrolled residents to meet Federal capacity benchmarks. 

Ample research shows that a strong primary care system is necessary to reduce health system costs and improve health outcomes over the mid- and long-term.

Reconfiguring the existing primary care system into the model of a “health care home,” with an emphasis on prevention, health promotion, and early detection and treatment. This includes ensuring that every New Yorker has a personal primary care provider as well as continuity and care management. It means that providers need to be supported in adopting and using health information technology and implementing proven best practices in access, prevention, and care management.

5 A Primary Care Capacity Shortage in New York City & The Potential Impact of Hospital Closures. Report prepared by The Primary Care Development Corporation & The New York City Health and Hospitals Corporation. September 2006
Naturopathic Doctors are New York’s Solution:

#1 Naturopathic Doctors Are Primary Care Practitioners

NDs solve a large percentage of the increasing primary care shortage. 6

Physicians (MDs & DOs) and Nurse Practitioners (NPs) are currently licensed to offer primary care services in New York. Naturopathic Doctors (NDs) receive adequate training to provide primary care services.

The tables below compare the training completed by MDs and NPs to training requirements for NDs.

NYANP  Benefit Analysis of Licensing of Naturopathic Doctors
#2 Naturopathic Care Has Been Shown to be Safe

Malpractice claims against CAM practitioners occur less frequently and typically involved less severe injury than claims against Conventional Physicians.\(^7\) ,\(^8\)

Jury Verdicts Northwest with civil court records in states where 55% of naturopathic doctors practice, reported that their records show zero cases against naturopathic doctors.

---

#3 NDs Prevent Chronic Disease & Decrease Health Costs

Naturopathic doctors are trained specifically in the prevention and early intervention of chronic conditions thus reducing premiums for those employees utilizing naturopathic medicine.  

Naturopathic Medicaid Services are 57.5% more cost effective than MD/DO/NP combined services. 

848 employees for the Vermont Automobile Dealers Association were examined and advised by NDs for one year. The organization saved $1.5 million in direct and indirect medical costs the first year; that is $1800 per employee.

The drastic reduction in health risk factors has resulted in a decrease in insurance premiums for each year the program has been in place.

- 36% reduction in the incidence of hypertension
- 16% reduction in the incidence of high cholesterol
- 35% reduction in multiple cardiovascular risks
- 17% reduction in smokers
- 21% reduction of physically inactive employees
- 25% reduction of excessive stress (both work and personal)
- Direct health care costs were reduced by an estimated $315,817 leading to a 4.6 to 1 return on investment
- Indirect health care costs were reduced by an estimated $1,143,657 leading to a 16.5 to 1 return on investment
- Combined direct and indirect health care savings lead to overall 21.1 to 1 return on investment ($21.10 saved for every dollar invested)
- Only 0.2% increase in per member claims cost last year (2005) compared to a national average of over 7%.

NYANP Benefit Analysis of Licensing of Naturopathic Doctors
Patient Testimonials

"Naturopathic medicine has helped me tremendously after being exposed to the dangers of Ground Zero after 9/11."

NYC Fireman, Naturopathic Patient

“I’ve had a good amount of medical problems as a child and young adult. However, and quite unfortunately, NONE of the methods ever cured me of my symptoms, and only further frustrated me or caused me more pain. My hopelessness and helplessness dissipated once I started working with Naturopathic Doctors. Naturopathy has not only nursed me back to health and cured me of my ailments, but it has inspired me to become a Naturopathic Doctor and to bring healing and relief to others a few years from now.”

Kaitlyn Stall, Naturopathic Patient and Medical Student

Doctor Testimonials

"I would like to start a practice in NYC. I am currently a primary care physician in my state. Patients from NY fly to Arizona to see me. Why are they not being given the choice in New York?"

Host of PBS TV show "Health Hot Seat"
Dr. Donese Worden, N.M.D.

"I live in New York but my patients and I have to travel to Connecticut for me to treat them."

Dr. Donielle Wilson, N.D., President of NYANP
Licensure Bill: S1803/A1937

Bill Includes:
1. License to diagnose and treat, using natural therapies.
2. Educational standards, including 4 years of naturopathic medical school, board exams, residency and continuing education requirements.
3. Licensure fee covers the cost of establishing the board.
4. Exemption for MDs, licensed practitioners and unlicensed practitioners who do not diagnose.

Bill Excludes:
1. Surgery
2. Childbirth
3. Psychotherapy
4. Radiation, Electrical Shock Therapy and EMG
5. Setting Fractures
6. Claiming to practice as other type of practitioner, unless licensed as such
